

Amogh Gopalakrishna Nayak

FullStack Software Engineer | NYC | nayak.amo@northeastern.edu | 857-339-8432
<https://linkedin.com/in/amogh-nayak> | <https://github.com/amoghnayak07> | <https://amoghnayak07.github.io/>

Skills

Languages:	JavaScript, TypeScript, Python, Go, Java, C/C++
Frameworks & Libraries:	React, React Native, Node.js, Express.js, Flask, FastAPI, SQLAlchemy
Databases & Cloud:	PostgreSQL, MongoDB, MySQL, Neo4j, Firebase, AWS, Docker, Nginx
Practices:	REST APIs, CI/CD, Testing, Observability, Multi-tenancy, RBAC, WebSockets
AI/ML:	LLM Integration, RAG Pipelines, Agent Orchestration, HuggingFace, Gemini
AI Dev Tools:	Claude Code, OpenAI Codex, GitHub Copilot

Experience

Founder, FullStack Engineer | [BuRP](#) (Business Resource Planning) Nov 2023 - Aug 2024

- Generated \$60K+ revenue from 20 paying customers in 3 months by building a multi-tenant ERP platform end-to-end and solo, owning backend, frontend, infrastructure, and UX.
- Shipped POS, order management, invoicing, inventory, billing, and team management as modular subsystems on a multi-org architecture with org-level data isolation and RBAC.
- Built a schema-driven dashboard engine letting clients define their own fields, labels, tables, and charts, and offloaded bulk report generation to an async SQS pipeline.

Software Development Engineer | LetsVenture Pvt. Ltd. June 2021 - July 2024

- Reduced p95 API latency by 66% across 100K+ daily requests by optimizing DB queries, adding targeted indexes, and fronting routes with CDN and load balancing.
- Built and owned 4 core fintech systems - ESOP management, investment commitment flows, a pitch-deck platform, and a payments + e-sign integration layer (Razorpay, SignEasy, Zoho).
- Eliminated manual async task overhead by architecting an AWS Lambda + SQS pipeline with CloudWatch observability for cross-service execution, monitoring, and alerting.
- Grew 2 junior engineers to SWE I promotions in 6 months by running weekly design and code reviews on API and query design.

FullStack Developer | [Praan-e-Rakshak](#) Oct 2020 - May 2021

- Cut emergency response time by 50% by building and launching an animal-rescue dispatch platform end-to-end and solo, supporting 500+ rescue cases.
- Built live tracking and incident routing by integrating Google Maps APIs with real-time coordinator dashboards over WebSocket-driven case state.

FullStack Development Intern | [ResoluteAI](#) July 2020 - Oct 2020

- Launched a clinical pilot for 100+ users ahead of deadline by delivering a production-ready MVP from DB design to React UI.
- Reduced patient no-shows by 25% by building automated scheduling and reminder flows via Zoom API integration.
- Raised frontend test coverage from 0% to 85% by introducing Jest and React Testing Library with reusable patterns.

Projects

Inspector GoGent | (*Go, client-go, Kubernetes, xAI Grok, Playwright*)

- Built a hierarchical multi-agent system in Go where LLM agents (xAI Grok) coordinate to diagnose Kubernetes cluster faults.
- Detected pod failures at a simulated MTTD under 10s by running a Kubernetes controller via client-go against a local cluster.

DungeonMind (AI D&D Sandbox) | (*React, Vite, FastAPI, PostgreSQL, HuggingFace Inference API*)

- Enabled real-time LLM behavior comparison by building a sandbox where two AI models compete as DM and Player via the HuggingFace API.
- Ensured simulation integrity by engineering a turn-based engine that enforces JSON contracts and persists state to PostgreSQL.
- Surfaced per-model observability via per-turn behavior tagging, reasoning capture, world-state tracking across sessions.

Education

Master of Science in Computer Science (GPA: 3.5/4) | Northeastern University, Boston Sept 2024 - May 2026

Courses: Algorithms, Web Development, Foundations of AI, App Dev, Distributed Systems, Database Management System

Bachelor of Engineering in Telecommunication Engineering | DSCE, Bangalore, India Aug 2016 - Aug 2020

Courses: C Programming, Python, Java, C++
